Muhammed Riyash J

Full-Stack Developer

Bengaluru, India | +91 70948 36267 | thisismd.riyash@gmail.com | LinkedIn | GitHub | Portfolio

Summary

Full-stack developer with 3+ years building headless storefronts, Laravel commerce back ends and WooCommerce stores, with 20+ sites shipped to production. Works across Astro, React, Next.js, TypeScript and PHP/Laravel. AI-native: builds with Claude Code, MCP and AI agent workflows, and builds LLM features on the Claude and OpenAI APIs.

Experience

Zethic Technologies LLP — Feb 2026 – Present
Full-Stack Developer — *Bengaluru, India*

- Built the new Young Onion storefront (Astro SSR, Preact, TypeScript) that replaces the WordPress store at youngonion.in; top contributor with 79 of 168 merged pull requests across product pages, cart, checkout, accounts and SEO schema.
- Extended ZetStore, the company's multi-store Laravel 13 commerce platform behind GD Farm Fresh and Young Onion: GSTR-1 reports with CSV export, coupon- and shipping-aware GST, and a back-in-stock waitlist.
- Hardened ZetStore's inventory and purchasing with server-side checks on purchase orders, returns, stock transfers, stock counts, warehouses and supplier imports, across 110 pull requests.
- Developed the live GD Farm Fresh headless storefront (Astro, Preact, Tailwind CSS on Cloudflare, over the ZetStore API), shipping 8 catalog, routing and layout fixes covered by Playwright tests.
- Built a Mystery Box fulfilment plugin for Young Onion's WooCommerce store that fills orders automatically on payment, replacing a manual coupon-and-child-order process; custom tables, REST endpoints, WP-CLI and 146 automated tests.
- Sped up Young Onion's WooCommerce store: re-enabled Cloudflare page caching a payment plugin had blocked, dropped 19 unused CSS/JS files (251 KB) per page and took ~0.6 s of Meta API calls off each page load.
- Shipped 36 pull requests to the company website, zethic.com (Astro, React, Tailwind CSS, Cloudflare): a rebuilt Careers page with a cached LinkedIn feed, 8 multilingual pages, 12 city landing pages, new service and portfolio pages, and sitemap tests.
- Implemented OneTrust consent gating for Odessa Inc. (US) on Divi WordPress: 6 Google Tag Manager consent triggers covering 30 tags, GA4 moved from the theme header into GTM, and 2 SSL and crawler-blocking issues traced.
- Owned three Laravel 8 and static HTML/CSS/JavaScript marketing websites (190+ commits), shipping reCAPTCHA middleware, a multi-step lead-capture form with source attribution, SEO redirects and a Mailchimp signup fix.

Freelance — Sep 2023 – Dec 2025
Full-Stack, WordPress and Shopify Developer — *Remote*

- Delivered 12+ WordPress and Shopify websites for SMEs and startups, lifting organic traffic by 25% on average.
- Built 3 custom plugins: a lead-management dashboard with forms, filters, CSV export and user roles; a WooCommerce order-tracking system with notifications; and a WooCommerce referral engine with points and analytics.
- Optimized 3 Shopify stores with Liquid, JavaScript and metafields, adding sticky CTAs, bundles and upsells that raised conversion by about 10% and average order value by 12%, with PageSpeed scores of 85+ on mobile and desktop.

Besant Technologies — Jan 2023 – Aug 2023
Full-Stack Developer Intern — *Chennai, India*

- Built Taskify, a task-management web app, over 6 months with React, Material UI, Redux Toolkit and Laravel REST APIs.

Independent Projects

Self-directed product builds — 2026

- Built 360 Home Healthcare (360homehealthcare.in), a live home-healthcare marketplace on Next.js and PostgreSQL with OTP booking, provider KYC onboarding and AES-256-GCM encrypted patient data.
- Building Fiomis, an Astro and Medusa v2 clothing store with Razorpay, GST invoicing and a stock ledger (case study).
- Built Inventra, a Next.js 16 inventory dashboard: purchase orders, warehouses, JIT controls, billing, 15+ KPIs (case study).
- Built an AI SaaS that turns blog posts and videos into X threads and LinkedIn carousels via the Claude and GPT APIs.

Skills

Languages: JavaScript (ES6+), TypeScript, PHP, HTML5, CSS3, SQL, Python (scripting)
Frontend: React, Preact, Astro (SSR/SSG), Next.js, Tailwind CSS, Vite, Material UI, Redux Toolkit, Responsive Design
